BATHROOM FURNITURE

Bathroom furniture is an integral part of any bathroom and can add character and colour to make a design statement. Choosing suitable bathroom furniture will help you to maximise your space by providing valuable storage. Vanity units and tall storage cabinets can transform the functionality of your bathroom and we can offer a range of options to suit a room of any size.

If you are not sure where to begin, chat with one of our experts to decide what options work best for your requirements and space.

WALL HUNG

There are many benefits in choosing wall-hung furniture, not just for aesthetic reasons, but on a practical level too. If your bathroom is small, wall-hung furniture can be a great way of optimising space while freeing up the floor for a spacious feel and easier access for cleaning. Wall-hung furniture can also be hung at any height, providing easier access for those with reduced mobility.

Before choosing this type of furniture you must ensure that you have a strong wall to support the weight. Pipework must be placed within the walls so that it is hidden from view underneath the vanity unit.

FLOOR STANDING

Floor standing furniture rests directly onto the bathroom floor without added wall support. Depending on the style and dimension chosen, freestanding units provide great storage space. Floor standing furniture also hides unsightly pipes from view making them a popular choice for renovation projects with existing pipework.

COUNTERTOP WITH BASIN

Vanity units with a countertop are designed to accommodate a vessel style washbasin which will sit directly on the surface. This gives you the freedom to customise your bathroom by choosing basins in a wide variety of shapes, sizes, and designs.

The washbasin does not connect to the wall at the back - this provides different options when selecting your basin tap. If the basin has a deck with a tap hole a standard basin mixer will work however if there is no tap hole you can select a tall basin mixer or a wall-mounted basin tap to complement your bathroom style.

COMPACT

Compact cloakroom and short projection vanity units are ideal for smaller bathrooms. They are suitably sized to fit a smaller space while also providing practical storage space to help keep your space clutter-free. Vanity units are available in wall-hung and floor standing formats, in a variety of colours, styles and finishes to suit your room.

BATHROOM STORAGE CABINETS

The bathroom is an area of the home where plenty of storage is invaluable. Having the option to keep all your toiletries and bathroom essentials out of view will keep your bathroom neat and tidy which has the added benefit of making it easier to clean.

CARE & MAINTENANCE

With all bathroom furniture is important that care is taken in everyday use and cleaning to ensure it looks as good as new for many years ahead.

VENTILATION

It is important to ensure good ventilation in the bathroom to avoid excessive moisture over long periods of time. Furniture should not be exposed to standing water or sustained moisture so any splashes should be dried to reduce the risk of damage.

CHEMICALS

Chemicals, such as nail polish remover; perfume, hair colour, solvents, ink, tea, coffee, juice and red wine must be removed immediately, otherwise it can permanently affect the surface.

CLEANING

It is important to clean any soiling immediately with gentle cleaning products and ensure your bathroom furniture is left completely dry. Never use solvents or abrasive or aggressive cleaning agents. Use a slightly damp, soft lint-free cloth or chamois to regularly remove dust.

The classic colours of the Dublin & Galway bathroom furniture ranges are complemented perfectly by the distinctive handles which are available in three colour variants.

The simplicity of design reveals an attention to detail in the smooth action rollers of the drawers. The drawer organiser in the top drawer will keep your bathroom essentials neat and tidy.

FEATURES

- Dublin wall hung vanity unit
- Galway floor standing vanity unit
- Soft close drawers and doors
- Matt black, chrome or brushed brass handles
- Inset basin or countertop option
- Matching tall storage unit

1400 U23192 **€375**

Optimus has a purity of form and a simplicity which means it works wonderfully in any setting.

Less is more with the Optimus collection. Push open drawers mean the soft clean lines are uninterrupted by handles while the colours have a classic elegance that will work harmoniously with any bathroom design.

SPACE SAVING BATHROOM FURNITURE

Space Saving Bathroom Furniture

Compact and short projection or reduced depth bathroom furniture is an ideal solution for smaller bathrooms, ensuites or guest bathrooms.

Despite its small footprint these cleverly designed vanity units will provide valuable storage to keep your bathroom essentials neatly hidden from view while taking up minimal space in the room.

Wall hung units have a lighter feel and give the illusion of free space which can make a room seem larger while floor standing units are ideal to conceal any pipework.

SANITARY WARE

A toilet and washbasin are the primary components of your bathroom, so choosing the right sanitary ware is essential for any new build or remodel. Thinking practically about how you want to use the space and planning well ahead can help you to make the most of your bathroom space.

Our team is available to discuss the various styles, brands, and sizes and help you to decide what options work best for your needs and space.

FULL PEDESTAL BASIN

Full pedestal basins are one of the most common styles found in cloakrooms and bathrooms. They are secured to your wall making them ideal for concealing your pipework. The range is available in a variety of different styles and tap hole options. They are the perfect choice as part of a bathroom refurbishment with existing pipework.

SEMI PEDESTAL BASIN

Semi-pedestal basins are wall-hung to a supporting wall with the pedestal finishing above the floor, providing more floor space and making cleaning easier. They particularly complement bathrooms that include a floating wall-hung pan or those with limited space.

COUNTERTOP BASIN

Countertop basins are mounted on top of a solid counter surface or vanity unit with a counter – the pipework will be concealed beneath the counter, and if visible, a decorative bottle trap waste can be used. This style of basin can be paired with a tall basin mixer of suitable height to give sufficient clearance or a wall-mounted basin mixer. Basins are available in a wide range of shapes, sizes, and designs offering a lot of design versatility to suit any bathroom of any size.

UNDER-MOUNTED BASIN

An under-mounted basin is designed to sit flush with a countertop for a seamless finish. Under-mounted basins are a popular choice for custom-built vanity units.

WALL HUNG BASIN OR CORNER BASIN

Wall hung basins are attached to the wall and will save space, are easily accessible and utilise difficult areas. A corner basin is a suitable option for cloakrooms, en-suites, and downstairs bathrooms due to its compact design. You can select from a variety of bottle trap wastes to suit your design with options available in white, chrome, matt black and brushed brass.

CLOSE COUPLED

A close coupled WC means the pan and cistern are both visible and the cistern sits on the back of the toilet pan which stands on the floor. It allows for more flexibility with pipework and is a suitable option for most bathrooms.

SHORT PROJECTION

A short projection toilet is suitable for ensembles or bathrooms that are limited on space as the design means that it protrudes a shorter distance away from the wall than a regular toilet.

Fully Shrouded

FULLY SHROUDED

A fully shrouded toilet's base and cistern go the whole way back to your wall. This conceals all your unsightly pipework giving a sleek finish.

Comfort Height

COMFORT HEIGHT

Comfort height toilets are typically 4-5cm higher than standard toilets making them considerably easier to use for older people and those with restricted mobility.

BACK TO WALL

Back-to-wall toilets fit close to the wall to conceal the pipe at the back of the toilet. It can be either close coupled with the cistern mounted on top of the pan or it can be a back-to-wall pan with a concealed cistern and visible flush plate.

WALL HUNG

A wall-hung pan requires a sturdy metal frame to hold its weight. This is concealed in a stud wall and includes a concealed cistern which is designed to be used with a visible flush plate. Wall-hung bathroom ware has the added benefit that cleaning the floor is considerably easier.

FRAMES, CONCEALED CISTERNS & FLUSH PLATES

The streamlined look provided by a concealed cistern requires the frame with cistern or a cistern to be concealed in the stud walls or purpose-built wall extensions. A frame will support the weight of the suspended WC pan while a concealed cistern is used with a floor standing back to wall pan. The frames are available in different heights to accommodate any obstacles, such as a window ledge, and are also height adjustable so the pan can be mounted at different heights to suit the users.

BRASSWARE

When choosing brassware for your bathroom it's important to choose a style and finish that will complement the look and feel of your space. We offer a wide selection of contemporary and traditional styles which look great and are high quality and durable.

In addition to standard chrome we now offer a range of high quality matt black and brushed brass bathroom taps. Colour co-ordinated wastes, shower valves and flush-plates are also available to create a unified look.

The performance of your taps will depend on the type of water pressure within your home. It is worth identifying your exact water pressure with a plumber.

BASIN MIXER TAPS

A basin mixer tap combines hot and cold water in one single spout, allowing you to easily control the water temperature and flow. When choosing a tap it is important to consider how it works with your basin to ensure there is sufficient space underneath and clearance for the water to fall. Tall basin mixers are suitable for use with countertop basins while smaller basin mixer taps are designed to pair with cloakroom vanity units to take up minimal space. A basin mixer is suitable for homes that have good water pressure.

PILLAR BASIN TAPS

Basin taps with separate taps for hot and cold water supply are used with 2 tap hole wash basins or vanity units. These are mounted onto the basin and sold as a pair. Basin taps are available in both traditional and modern styles.

TALL BASIN MIXER

High rise basin mixer taps are ideal for use with vessel basins without a tap hole. When fitted directly to a counter top the extended height of the tall basin mixer will provide sufficient clearance space above the basin. You will need to check your water pressure against the minimum required for any basin mixer tap.

TRADITIONAL

Traditional taps create a timeless and classic feel to your bathroom and look great with both traditional and contemporary bathroom furniture or wash basins.

LEVER HANDLE

Lever style basin or bath taps are easier to operate than traditional turning mechanism taps. This can be an important consideration for homes with young children or in cases where the hand strength of the user may be impaired.

BATH FILLER OR BATH SHOWER MIXER

When you have a bath you can select a bath filler to simply fill your bath or a bath shower mixer tap which means you can divert water to a shower handset. Most ranges include both options to suit your needs and ensure you have a consistent look throughout your bathroom. Deck-mounted bath taps are mounted to your bath through drilled holes on the surface of the bath.

FLOOR STANDING BATH TAPS

Bath taps which are positioned on the floor are designed for use with freestanding baths to create a focal point in your bathroom. They are available in a range of styles and finishes. Due to the nature of these taps it is essential that they are considered while creating the initial plumbing and pipework plans for your bathroom.

WATER PRESSURE

Some taps need a specific water pressure to function correctly. It is recommended that you check with your installer to ensure you choose the right taps for your home. We have outlined the minimum and maximum water pressure range in this catalogue so you can ensure you can achieve a good water flow rate.

Water pressure in this catalogue is measured in Bars – this indicates the force of which the water goes through the pipes in your home. 1 bar being the force to push water through a 10 metre pipe. Less pressure than a bar (0.1 - 0.99 bar) is typical in domestic settings.

CARE & MAINTENANCE

It is important to avoid using any corrosive or abrasive cleaning products or utensils on your brassware to avoid damage to the surface finish. A mild detergent or warm soapy water with rinsing after cleaning is recommended.

Household bleach or other strong chemical cleaners should not be used on bathroom fittings and any contact with your tap should be rinsed away with fresh water immediately.

SHOWERING

Wake up to a luxurious showering experience every day by selecting the perfect shower, shower tray and enclosure or wetroom to suit your needs and your space.

We have included some useful information but recommend you speak with a trade professional who will be able to guide you as to the best options to meet your needs.

TYPES OF SHOWERS

MIXER SHOWERS

Mixer showers combine hot and cold water supplies to deliver water at your ideal temperature. They are easy to use and ideal for homes that have a good supply of hot water. Minimum of 0.1 bar water pressure is required.

CONCEALED SHOWERS

Concealed showers require the body of the valve to be installed behind the wall with the shower head fixed to the wall or ceiling and the controls mounted flush to the tiled wall. When choosing the concealed shower kit make sure the valves fit in the wall cavity where it's going to be installed.

ELECTRIC SHOWERS

Electric showers are wall-mounted units that heat water on demand, making them a convenient option which is especially useful in busy households. They only require a cold water supply as the water is then heated quickly by passing over an element inside the unit. Newer models are quieter and more efficient and you now have the option to select dual outlet models that feature both a handset and overhead soaker.

POWER SHOWERS

Power showers include an integrated pump that make them perfect for bathrooms with low water pressure. Pumped showers utilise pre-heated water while pumped electric showers heat and pump the water as it is used. A power shower boosts water pressure without the need for an additional pump.

THERMOSTATIC CONTROL

Thermostatic showers maintain a constant, safe water temperature while the shower is running and feature cool touch surfaces to reduce the risk of scalds to users. This is a particularly important feature when users are children, older people or those with any mobility restrictions.

FACTORS THAT INFLUENCE YOUR CHOICE OF SHOWER

WATER PRESSURE

The water pressure in your home is a key factor which will influence the type of shower you need and the strength of the spray in your shower.

Water pressure in this catalogue is measured in Bars – this indicates the force of which the water goes through the pipes in your home. 1 bar being the force to push water through a 10 metre pipe. Less pressure than a bar (0.1 - 0.99 bar) is typical in domestic settings.

WATER SYSTEM

1. Gravity fed systems use a cold water tank in the attic space with a hot water storage cylinder. Low water pressure is often a feature of this system so a shower pump can be used to boost water pressure to one or more showers.
2. Combi boiler heating systems have no water storage tank as the boiler heats the water as you use it. This system generally provides high pressure water supply.
3. Unvented systems use a hot water storage tank and can provide high volumes of hot water. This system is without a cold water storage tank as cold water is supplied directly from the mains. This system generally provides sufficient water pressure.

SHOWER PUMP

A shower pump is used to boost water pressure in cases where the flow is insufficient. The type of pump you need will depend on the type and configuration of your water heating system and also the water demand required for your household. Your installer will be able to advise you on the requirements for your home.

CLEANING & MAINTENANCE

It is important to avoid using any corrosive or abrasive cleaning products or utensils on your shower valve so as not to damage the surface finish. A mild detergent or warm soapy water with thorough rinsing after cleaning is recommended. Household bleach should not be used on shower surfaces and any contact with your shower or tap should be rinsed away with fresh water immediately.

BRISTAN

Choosing the right shower enclosure will be a key factor in both the functionality and the aesthetics of your new bathroom.

SHOWER ENCLOSURE STYLES

1. Framed enclosures have a metal trim around the entire enclosure including the doors
2. Semi-frameless enclosures are framed but the door does not have a metal surround
3. Frameless enclosures have no metal frame around the glass panels – they may however have a metal profile to connect the glass panel to the wall or to other panels. Support bars are sometimes required to lend stability to the enclosure.

ADJUSTMENTS

Adjustments compensate for walls that are not perfectly straight. Adjustment allowances for each enclosure refer to the compensating space allowed by moving the glass within the profile of the enclosure. The profile is the material that connects the glass panel to the wall.

GLASS THICKNESS

Glass thickness ranges from 4-10mm plus. Thicker glass is heavier and typically requires stronger support which combines to provide a higher quality, more sturdy door that has a feeling of luxury. Glass in shower enclosures is toughened safety glass which is stronger than regular glass and should it break it will break into small pieces rather than shards for safety.

EASY CLEAN GLASS

This refers to a coating which is a thin layer on the glass which is designed to repel water helping to prevent streaks, marks and dirt from accumulating on the surface thereby reducing the amount of cleaning required.

QUICK FIT

Selected enclosures are denoted as Quick Fit – these are designed for one person installation and have features including slot and lock mechanism, no drill frame and click on rollers to ensure easier, faster installation.

QUICK RELEASE ROLLERS

This feature means that the moving door can be released easily to facilitate thorough cleaning of the enclosure.

MAGNETIC SEALS

Magnetic seals along the edges of the doors ensure a robust seal will be maintained and the enclosure is unlikely to open accidentally while in use.

REVERSIBLE

Reversible doors are suitable for left or right fitting.

CHOOSING A SHOWER ENCLOSURE FORMAT

There are some considerations when selecting a shower

- Space available
- Door opening
- Height available
- Accessibility
- Size and shape
- Existing pipework locations

Shower Enclosure Shape & Format

Aside from corner entry enclosures and quadrant enclosures the enclosures can be fitted with a side panel or can be fitted into a recess or alcove.

WET ROOM PANELS

A wet room provides a stylish contemporary look and will often include shower panels to contain and deflect the water spray from your shower. This is a great option when unrestricted access will provide a more convenient, safer showering experience for those with reduced mobility. There are a variety of configurations possible when planning a wet room using multiple panels, stabilising bars and swivel panels. Your installer will be able to advise you on the options available.

ROSERY NOVA SHOWER DOORS

When you choose a shower enclosure you will also need to select a matching shower tray from the variety of options available.

TRAY MATERIALS

Acrylic provides a durable finish that's easy to clean while also resisting scratches and stains. Stone Resin is made from stone combined with resin, which is moulded and polished when finished. An acrylic cap means the stone core is protected, and the surface is more scratch-resistant and durable.

Slate Effect Trays are selected for their natural aesthetic in the textured finish and variety of colours which mimic the natural material but is easy to clean, durable and resistant to chemicals.

Anti-Slip Trays offers peace of mind for all users but particularly in households with children or elderly residents to provide a safer shower experience.

TRAY TYPES

LOW PROFILE

Low profile trays have a height from the floor of 25-45 mm providing easy access and a minimalist look – this requires your waste pipework to be installed below your floor level.

STANDARD HEIGHT

Standard raised trays sit higher off the ground to provide space for the pipework.

LEVEL ACCESS

Level access trays allow for walk-in step-free access to a walk in shower enclosure or a wet room area. They are installed flush to the floor with a flush waste. All pipework is recessed below the tray.

PRE-FORMED TRAYS

Wetroom tray pre-formed boards can be used as a base onto which tiles are laid to provide a seamless look while being strong and durable. This is an excellent choice for accessible bathrooms or for future proofing any family bathroom.

CUT TO SIZE TRAYS

Selected trays can be cut to size to fit any awkward spaces where a perfect fit is needed.

NATURE LYON SHOWER TRAYS

Nature Lyon slate effect shower trays are extra-slim and lighter weight while also being durable over time. The tray includes a sleek chrome grid.

FEATURES

- Stone resin anti-slip tray
- Can be cut to size on site
- Chrome grid
- Anti bacterial surface
- Textured Finish
- Anti Slip Surface

BATHS

Baths can be a key design feature in your bathroom while also offering essential functionality for your household. The space available in your bathroom will be a key determining factor in selecting a bath – a larger bathroom could host a statement freestanding bath whereas a smaller bathroom may call for a compact option or a shower bath.

SINGLE ENDED

Single-ended baths are the most typical style found in many homes. The taps and waste are located on one end leaving a single backrest for comfort. This type of bath is ideal for sitting flush against a wall or corner. They come in a wide variety of sizes to suit different bathroom spaces.

DOUBLE ENDED

Double-ended baths are designed to have the taps fitted centrally either in the tub or onto the wall. This allows for both ends to be free as the backrest. The waste is also fitted centrally in the tub.

SHOWER BATHS

Shower baths are a great choice for bathrooms that don't have room for a separate bath and shower. This style of bath is perfect for those short on space who still want the option of showering or bathing.

FREESTANDING BATHS

Freestanding baths create a stunning centerpiece in a bathroom. Modern types are usually thin-rimmed, double-ended, and sit neatly on the floor, whereas more vintage designs tend to be slipper-shaped or roll-top and often stand on claws.

ACRYLIC BATHS

Acrylic is the most common material from which baths are made – these offer excellent value and are light weight making them easier to transport and fit. Acrylic also retains heat and is a warmer to the touch.

STEEL BATHS

Steel baths offer durability and style with great heat retention. Steel is stronger and more durable than acrylic and has chemical and UV light-resistant properties to prevent discoloration.

BRASSWARE FOR BATHS

Baths come with pre-drilled tap holes or can be supplied without tap holes so it can be drilled on site. A variety of styles of pillar bath taps, a bath filler mixer tap or a bath shower mixer can be selected. A bath shower mixer tap operates as a bath filler but also can diver the water to a shower handset giving you the best of both options.

When selecting a freestanding bath you need to consider the options for a tap that will complement the style and design. Floor standing bath taps are a popular choice for freestanding baths that do not have any tap holes.

ENCAPSULATED BASEBOARD

Several of the baths available have an encapsulated base board - this refers to a high strength base board that is reinforced with a glass fibre resin, providing the ultimate super-strong, robust bath which will also hold the heat longer than a standard bath.

All in 1 Universal Dual Flush
Siphon**

U74825

Features

- Unique all in one universal dual flush siphon
- Height adjustable 7 1/2" to 10 1/2"
- Adjustable flush volumes.
- Unique flapper system

**Wirquin Jollyflush Dual
Flush Valve 2" & 1 1/2"**

U15815

Features

- Cistern height 300 - 420mm
- Flush rate litre/min: 2.2
- Fits both 1 1/2" & 2" outlets
- Cable control
- Top or front mechanism

**Wirquin Metro Oblong
Adjustable Siphon**

U54452

Features

- Ideal for use in standard size cisterns
- Replacement without the need to remove the cistern
- Flush volumes varied between 6/7/9 litres

**Wirquin Jollyfill Bottom
Entry Telescopic Brass Inlet
Valve**

U97139

Features

- Inlet end: 1/2" plastic or brass
- 3/8" brass
- Filling rate at 0.1 Bar: 3.1 l/m
- Functioning range: 0.1 up to 16 Bar
- Water saving delayed action

**Wirquin Jollyfill Side Entry
Brass Inlet Valve**

U97137

Features

- Inlet end: 1/2" brass or plastic
- Filling rate at 0.1 Bar: 3.8 l/m
- Functioning range: 0.1 up to 16 Bar
- Resistant to peaks of pressure up to 20 Bar

**Wirquin Jollyfill 9 1/2"
Bottom Inlet Valve**

U97141

Features

- Inlet end: 1/2" brass or plastic
- Filling rate at 0.1 Bar: 4.1 l/m
- Functioning range: 0.1 up to 16 Bar
- Resistant to peaks of pressure up to 20 Bar

**Fluidmaster Pro Lever
Cable (350mm) Dual Flush
Valve 1.5\"**

U72398

Features

- Adjustable flush volumes
- Fits 1 1/2\"
- Cable length 350mm

**Fluidmaster Cable Dual
Flush Valve 1 1/2\"**

U48822

Features

- Adjustable flush volumes
- Fits both 1 1/2\"
- Cable length 350mm
- Button fits top, front or side applications

**Fluidmaster Pro Universal
Cistern Pack**

U72399

Features

- Fits 1 1/2\"

**Fluidmaster Pro Universal
Ultra Split Siphon**

U77987

Features

- Fits 1 1/2\"
- Easy to install and service
- Easy to flush
- Unique full and partial flush volume adjustability
- Retrofits other siphons

Fluidmaster Pro 8\"
Compact Dual Flush Siphon

U72372

Features

- Perfect for closet WC
- Dual flush
- Adjustable flush volumes

**Fluidmaster Bottom Entry
Float Valve**

U48820

Features

- Ultra quiet
- 1/2\"
- Fast refill
- Anti-siphon design

**Fluidmaster Side Entry
Float Valve**

U48821

Features

- Ultra quiet & fast refill
- 1/2\"
- For use in a toilet cistern or storage tank
- Anti-siphon design prevents contamination

Fluidmaster 1/2\"
Side Entry Ball Valve Brass Thread

U72192

Features

- Ultra quiet & fast refill
- 1/2\"
- For use in a toilet cistern or storage tank
- Anti-siphon design prevents contamination

SIPHON & INLET VALVES

Fluidmaster Pro Bottom Entry 1/2" Brass Shank Float Valve

U72397

Features

- Heavy-duty brass shank
- Ultra-quiet operation
- Easy to Install
- Fits all brands

Fluidmaster Torbeck Side Entry Fill Valve

U73528

Features

- Prevents contamination of fresh water supply
- Quiet fill
- Fast refill

Fluidmaster Torbeck Bottom Entry Adjustable Fill Valve

U73529

Features

- Bottom fill 1/2" brass shank
- Quiet and fast fill
- Works well in low pressures

Skylo Dual Entry 4 in 1 Fill Valve

U43831

Features

- Bottom or side entry
- Supplied with 1/2" and 3/8" threads
- 180 degree rotation float
- Quiet fill and telescopic

Fluidmaster Delchem 8" Dual Flush Siphon

U72394

Features

- Also available in 7.5" 8.5"
- Water saving
- Adjustable full flush volumes
- Flush outlet size 1-1/2"
- Lever/button mounting front
- Internal overflow

Skylo 3 Part Dual Flush Height Adjustable Siphon

U43830

Features

- Adjustable from 7.5"-9.5"
- Multiple flush volumes
- Internal overflow
- Easy to service

**Fluidmaster Replacement
Float Valve Seal**

U72362

Features

- Easy to install
- Suitable for multi-pressure applications

**Fluidmaster Close Coupling
Kit for Cistern**

U46846

Features

- 1 1/2" outlet
- Complete with close coupling washer
