Aluminium Radiators

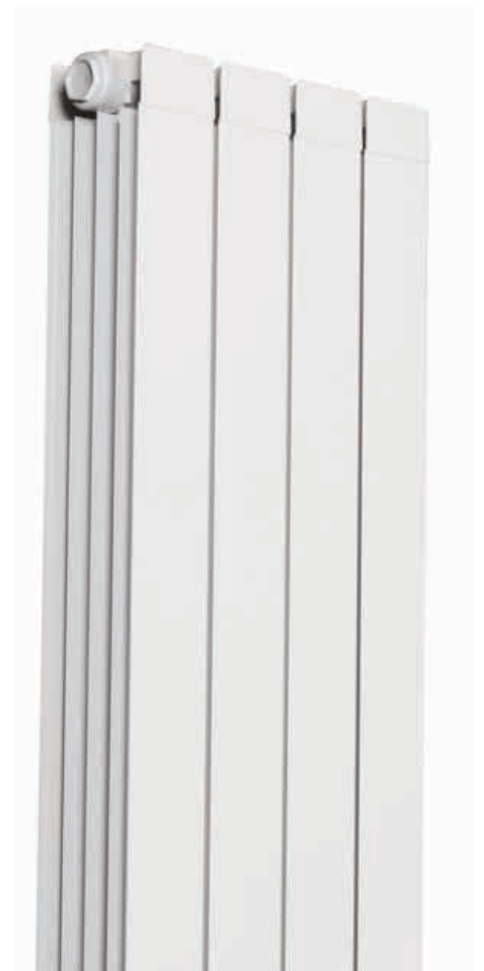

Aluminium Radiators are ideally suited for pairing with lower temperature water from heat pumps and condensing boilers. As aluminium responds instantly to changes in temperature, the radiator heats up quickly and reacts quickly to the radiator's thermostat to regulate room temperature. This ensures they are the most efficient and effective radiators available, reducing energy consumption and fuel costs.

Designed and manufactured in Italy by one of the world's leading manufacturers of die cast aluminium radiators Comfort and Comfort Vertical Radiators deliver superior quality and performance matched by a sleek and stylish finish. The radiators meet the highest EU standards utilising modern manufacturing techniques and undergo rigorous quality testing.

- Quick response with fast heat up time
- Suitable for both low and high temperature heating systems
- Ideal for use with Heat Pumps and condensing boilers
- Lightweight and robust
- Resistant to corrosion
- Modular with custom lengths available as required
- Brilliant white powder coated finish RAL 9010
- The maximum operating pressure is 600 kPa (6 bar)
- Thermal output complies with the European standard UNI EN 442-2

Comfort Aluminium Radiators

Comfort Vertical Aluminium Radiators

Comfort Aluminium Radiators

The Comfort Aluminium Radiators have a compact design with a sleek slim design and brilliant white powder coated finish making it the ideal heat emitter for any modern home.

Comfort radiators are offered in a range of heights and lengths to provide the ultimate balance in functionality, design and comfortable warmth in any dwelling.

- Height 580mm
- 3 to 24 sections

A full range of accessories are also available.
